

**INTRODUCING: GPR FIELD SERVICES**

- |                     |                        |                           |
|---------------------|------------------------|---------------------------|
| *VIBRATION ANALYSIS | *INFRARED THERMOGRAPHY | *PREVENTATIVE MAINTENANCE |
| *WINDING ANALYSIS   | *MOTOR REMOVAL         | *LASER ALIGNMENT          |
| *ELECTRICAL TESTING | *MOTOR INSTALLATION    | *SERVICE CONTRACTS        |
| *PICKER SERVICE     | *BEARING CHANGES       | *BALANCING                |
|                     | *GENERATOR MAINTENANCE |                           |

**GPR'S CARE, COMMITMENT AND EXPERIENCE DOESN'T STOP ON OUR TEST BED!**

To compliment the quality, ISO Certified, repair or replacement of your electric motors or generators GPR offers professional field service. Experience tells us that TOTAL CARE pays you dividends in the transportation, handling and installation of your new or repaired motors and generators. GPR has a team of electric motor service technicians, millwrights, electricians and heavy duty mechanics to test, analyze, remove, install and warranty your motors or generators. GPR has a fleet of service trucks and flat decks and is currently partnering with quality transportation companies who have the appropriate air ride trailers/elbow pickers and qualified personnel required to do the job.

***"WE KEEP INDUSTRY RUNNING!"***

- |                                                  |                                                                                                                                                                                               |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ELECTRICAL TESTING<br/>(WINDING ANALYSIS)</b> | Let GPR's electrical technicians with MCC and control training verify the supply cabling motor windings with our surge comparison winding analyzing equipment.                                |
| <b>MOTOR REMOVAL</b>                             | Field Service millwrights/electricians will remove and transport the unit to our ISO Certified Repair Facility.                                                                               |
| <b>ON SITE MOTOR<br/>MAINTENANCE</b>             | Electric motor service technicians will perform on site motor maintenance, including bearing changes, clean ups, pulley or coupling removals and / or lubrication programs.                   |
| <b>MOTOR INSTALLATION</b>                        | GPR technicians will be responsible for transportation, handling and installation of your new or repaired motor or generator and it will also extend your warranty for further peace of mind. |
| <b>LASER ALIGNMENT</b>                           | Journeyman millwrights using the latest aligning equipment and software will ensure extended equipment life.                                                                                  |
| <b>VIBRATION ANALYSIS</b>                        | GPR has been performing vibration analysis for more than twenty years. When your motor has been professionally installed and aligned consider trending critical applications.                 |
