

Power Generation Division - Journeyman Electrician

This position involves field repair, installation and maintenance of power generation units and related electrical components with some variable frequency drives and / or other electrical systems.

Requirements:

Minimum 5 years experience in an industrial setting.
Excellent trouble shooting & problem solving skills.
Apply electrical code to design, construction and installation of electrical components.
Test all equipment to either factory or GPR quality assurance specs.
Work well as a team player with clients & co-workers.
Prompt completion of paperwork & time entry.
Strong communication skills.

We offer:

We offer a 40 hour, 5 day work week plus overtime when required.
Competitive wages & benefit package.

We are an ISO 9001-2008 company with 46 years serving our industry.

Pre-employment drug testing is in effect.
